## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 11 and 12-25, drawn to a solid, oral control release pharmaceutical dosage form, classified in class 424, subclass 464.
- II. Claims 9 and 10, drawn to a process of preparing a dosage form, classified in class 424, subclass 427.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the oral dosage form can be made by a different process, in which the active agent a polymeric matrix are simply combined and then coated with different types of polymeric materials to provide different relelase rates, which does not require the instant steps of shearing to form aggregates and extruding the agglomerates to form pieces, as in group II. Further, the process of making the dosage form does not require any active agent and accordingly the process can be used to make other dosage forms such as a placebo, delivered via ocular or other routes, which are not necessarily delivered by oral route.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be

used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process of making the dosage form does not require any active agent and accordingly the process can be used to make other dosage forms such as a placebo, delivered via an ocular or other routes, which are not necessarily delivered by oral route. Further, the process does not require the dosage form to be a controlled release formulation, as required by the product and instead could be an immediate release formulation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
